

Undermount sinks

Stainless steel is always fashionable, and it blends perfectly in any worktop, be it granite, quartz or solid-surface. The large range of Foster undermount sinks, from those with "classical" design and wide radius to the minimalist ones with squared corners, makes it possible to choose according to everyone's specific needs.

At the root of each project

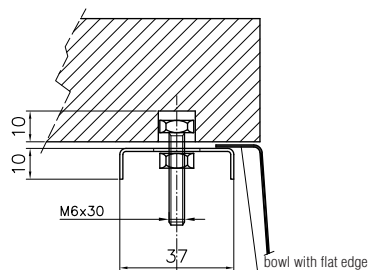

Foster, ever sensitive to its customers' needs, aims at the maximum possible quality, coupled with an wide choice of designs and sizes. This large range of undermount sinks is here displayed **according to corner radius; from squared bowls minimalism to the perfectly rounded corners**. In the following table it is summarized according to "cabinets": the easiest way to choose the best product according to its own built-in solution. From 100 cm cabinet down to 30 cm.

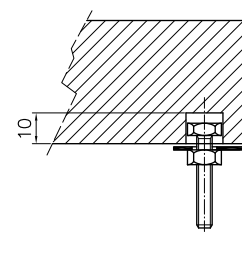

Notice for installation

Installation procedure with nut, bolt and bracket for bowls with folded edge.

Installation procedure with nut, bolt and bracket for bowls with flat edge.

Installation procedure with nut and bolt for bowls with edge provided with fixing holes (Quadra series).

All models are supplied with installation kit (nut, bolt and bracket). The alternative use of different screws or bolts is left to the discretion of the installer.

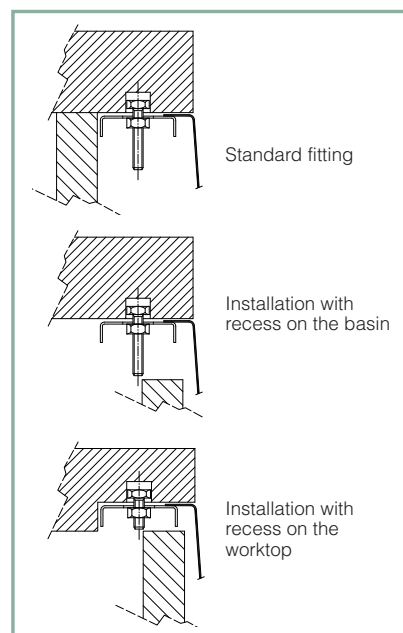

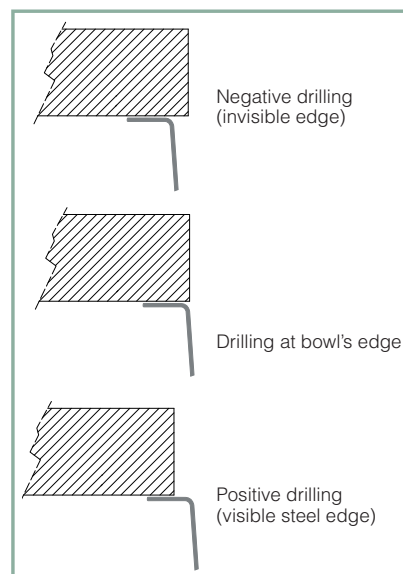

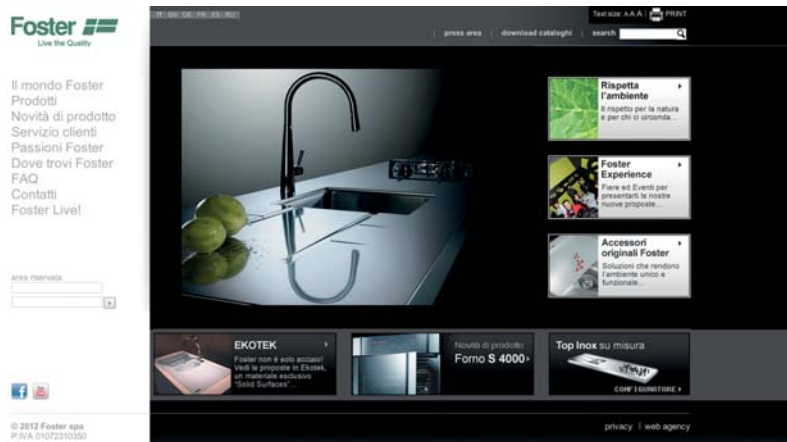

Worktop drilling

The drawing with instruction to drill the worktop properly is included in the packing. The holes' dimension is to be considered merely as the manufacturer's suggestion. Small adjustments can be adopted on the basis of need or preference of the user, as per the attached schemes.

Notice:

the compatibility of the accessories is assured only if the manufacturer's drilling instructions are respected.

Foster offers its assistance for drilling the worktop properly with dwg drawings, now available for downloading on our website www.fosterspa.com on the product specifications page.

Cabinets

The cabinets' specifications shown for each model are referred only to the bowls' overall dimensions, and do not take into account the fixing systems. Different overall dimensions correspond to different installation methods. Moreover, these are negligible if kept within the thickness of the worktop, by creating a proper nook.

It is therefore recommended to check beforehand for possible interferences.

The undermount range

The scheme below shows the whole undermount range classified according to "cabinet": the smallest standard element of a modular kitchen in which a sink can be fitted in.

Quadra

Quadra is **a tailor-made product in which every detail counts**. Elegance and practicality in an evergreen representative of the minimal design.

Quadra

features

In the sinks of the Quadra series **the corners at the bottom of the bowls have a radius so as to make cleaning easier**, while the vertical corners, with their rigorous "zero radius", maintain the original squared-out design.

The water drainage on the bowl's bottom is an important feature. The Quadra sinks feature an **elegant diamond-shaped crease on the bottom** that makes the water flow easier.

Also in undermount version, the large single-bowl sink is now available also with the **original and practical 7" drain**.

Undermount
Sinks

Waste-disposer unit

Power	Code	EAN
380 W	8439 112	8033524377831

Foster waste disposers can be installed in all our sinks with 3.5" waste fitting. Remember to check the dimensions of the sink-waste shredder assembly. Waste disposers' compatibility with sinks of other manufacturers is not guaranteed.

The waste disposer unit includes a practical pneumatic control. It can be installed on the worktop or on the sink.

Accessories for food waste disposers

Radio control

Code	EAN
8439 901	8033524378098

The remote control allows easy activation of the food waste disposer even when a switch-controlled outlet is not available.

Complements

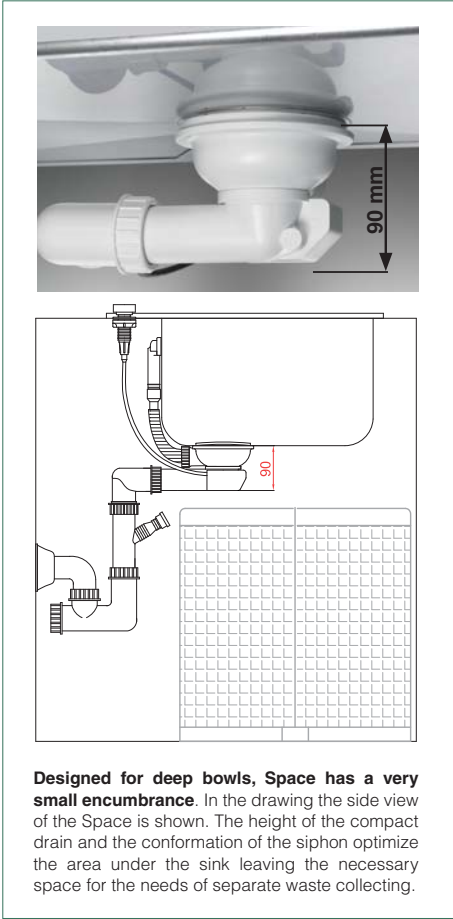

"SPACE" saving - automatic waste fittings for sinks with perimetric overflow

"Space" automatic waste fitting is a useful complement with a plain and accurate design in every detail: **the right fitting for our most prestigious sink series.**

The elegant steel cap closes tightly the drain **and leaves no visible residues.**

"Space" is equipped with **the original perimetric overflow** that enhances the bowl. Please check if available for the chosen sink.

The steel cap Space **collects the food waste in the flexible neoprene basket below**, very easy to clean.

For installation on the worktop all the automatic waste fittings require hole Ø 35 mm.

Second and third tap hole available

Notes on compatibility of automatic drains

Automatic drains are compatible with sinks that are supplied with at least one second hole (in addition to the tap hole).

For many sinks this is not a standard feature but it can be requested when ordering it. In the sinks drawings standard holes are shown with a continuous line, while positions for any holes on request are shown with a dashed line (see example aside).

For undermount sinks the possibility of insertion of the automatic drain is always shown because the hole can be positioned on the worktop.

It is also recommended to check the type of the overflow of the sink in order to choose a compatible automatic drain.

The drains PA, PE, PM with perimeter overflow are interchangeable.

The drains PR, PQ, PC with standard overflow are interchangeable.

How to clean steel

Stainless steel products do not need any particular servicing. However, they do require a certain care and use of adequate detergents for daily cleaning. By and large, all that's needed is to wash with hot water and soap or hot water and vinegar, and thoroughly rinse and dry with a cloth. Do not use: hydrochloric acid, abrasive powders, steel wool, brushes and products for cleaning silver.

When it comes to detergents for cleaning steel, Foster recommends the products in the "Steel Clean" line:

- **all-purpose aerosol** for daily cleaning use
- **microfiber cloth** to wipe off traces of grease and powder.
- **professional cream** to restore the original splendour of the steel, remove scaling, stubborn dirt and rust marks caused by contact with ferrous materials.
